INTERPRETATION:

Kidney function tests are urine or blood tests that evaluate how well your kidneys are working. Most of these tests measure glomerular filtration rate (GFR). GFR assesses how efficiently your kidneys clear waste from your system. They help your body filter waste materials and expel them as urine. Your kidneys are also vital for producing:

- Hormones that maintain blood pressure.
- Red blood cells, which carry oxygen throughout your body.
- Vitamin D, which maintains bone and muscle health.

Liver function tests (LFTs), or liver panels, measure enzymes, proteins, and other substances in the blood to assess liver health. These tests help evaluate the overall functionality of the liver.
